ROUND TARGET
(~\$562K USD)

PRE-SEED · RP 10 BILLION IDR (~\$562K USD) FOR 10%

Buying car parts online is a guessing game

Horizontal marketplaces treat brake pads like sneakers. Because they have no fitment engine, transactions fail before the part even ships.

19.4%

PARTS SOLD
ONLINE RETURNED

Across e-commerce, one in five automotive parts sold online is returned by buyers, paralyzing inventory and draining shop cash flow.

SERVERTAIL BENCHMARK

86%

RETURNS
FITMENT-DRIVEN

Not buyer regret or damaged goods. 86% of returned auto parts are caused by incorrect engine codes, model trims, caliper sizes, or production years.

ALHENA AI RESEARCH

17–20%

MARKETPLACE
COMMISSION SQUEEZE

Dynamic platform fees, payment deductions, and forced promos consume up to 20% of sales. With wholesale margins at 5–10%, online sales result in net losses.

JUNE 2026 JAKARTA SURVEY

Sources: 19.4% automotive e-commerce return rate — ServeRetail Research. 86% fitment error share — Alhena AI. 17–20% all-in commission from our in-person survey of 60 shops across Jakarta (MGK, Senen, Pondok Cabe).

What is closing physical shops

In June 2026, we interviewed 60 shop owners in person across three Jakarta automotive centers. Three systemic failures surfaced—and none were about demand.

MGK KEMAYORAN · WHOLESALER

"Today I got an order from Shopee. I calculated my margin after the service fees and promo cuts, and I was losing money. I had to cancel the order."

Owner, Wholesale Brake & Suspension, MGK Kemayoran

The Commission Squeeze: Traditional wholesalers survive on tight 5–10% margins. 17–20% marketplace deductions wipe out all gross profit.

ATRIUM PLAZA SENEN · RETAIL KIOSK

"My store account was frozen because of too many COD returns. The buyer picked the wrong car model, but the platform penalized my store."

Owner, Engine & Transmission Parts, Atrium Senen

The COD Return Trap: Platforms auto-settle disputes in favor of buyers. Shops absorb two-way shipping costs, torn packaging, and algorithmic store bans.

PONDOK CABE · SPECIALIST SHOP

"I would get dizzy typing manual entries for each part. My shop carries over 3,000 SKUs. Who has the time or staff to type that?"

Owner, Japanese Spare Parts, Pusat Onderdil Pondok Cabe

Catalog Ingestion Barrier: General platforms require manual single-item form entry. With 3,000+ complex SKUs, owners give up before listing.

Methodology: Sixty physical parts stores approached face-to-face during June 2026 at Atrium Plaza Senen, Pusat Onderdil Pondok Cabe, and Mega Glodok Kemayoran (MGK). Interviews conducted in Indonesian; quotations translated.

Return costs destroy annual rent

Eliminating wrong-part returns isn't just an e-commerce feature—it saves enough cash to pay for the shop's physical premises.

CONVENTIONAL MARKETPLACE

19.4% Return Rate

Baseline Loss per 100 Orders (AOV Rp 1.5M)

- **Primary Cause:** 86% of returns caused by mistaken vehicle trim, engine code, or year.
- **Two-Way Courier Cost:** Rp 30,000 – Rp 50,000 per package absorbed by seller.
- **Damaged Packaging / Torn Seals:** ~15% AOV loss (Rp 225,000 per return).
- **Total Burden per Return:** Rp 255,000 – Rp 300,000 per error incident.

REAL MONTHLY DRAIN (100 ORDERS/MO)

-Rp 5,040,000 to -Rp 5,320,000 / mo

Drains 35% of shop gross profit strictly on return logistics waste.

MOBEELI ECOSYSTEM

<5% Return Target

Verified Fitment Protection (AOV Rp 1.5M)

- **Fails-Closed Fitment:** 5-level YMM matching stops wrong orders before checkout.
- **72-Hour Dispute Clock:** Shop is 100% exempt from return penalties if OE spec matched.
- **Escrow Safe Settlement:** Funds held 48 hours; zero fraudulent COD refusal scams.
- **Net Savings:** Eliminates ~15 return incidents per 100 transactions.

ANNUAL CASH SAVED PER KIOSK

+Rp 56.9M to +Rp 60.2M / year

Covers >100% of an automotive mall kiosk's annual rent (Rp 35M–50M/yr)!

Note: Courier rates based on JNE regular Jakarta–Jabodetabek standard (Rp 10k/kg for 3–4kg automotive parts). Return charge policies sourced from Tokopedia Care & Shopee Edu seller guidelines. Kiosk rent estimated at Rp 35M–50M/year per MGK Kemayoran benchmarks.

Five pieces, none available off the shelf

Horizontal tech companies have zero incentive to build vehicle fitment ontologies. We spent years structuring Indonesia's automotive graph before opening this round.

191,646

The Verified Fitment Graph

Relational database mapping specific aftermarket SKUs to exact Indonesian vehicle variants, engine configurations, and OE part numbers. Not scraped text tags—structured graph relationships.

5,924 Variants · 71 Makes

Indonesian Vehicle Catalog

Comprehensive coverage (99.5%) of passenger and light commercial vehicles operating in Indonesia, from legacy Kijang and Avanza to modern hybrid and battery-electric fleets.

INTEGRITY ENGINE

5-Level Fails-Closed Gate

Year → Make → Model → Trim → Engine code. If compatibility is uncertain, the system refuses to mark the part as "Verified Fit."

ANTI-DUMPING

Single-SKU Architecture

One official catalog listing per OE part. Authorized distributors compete on genuine stock readiness and logistics, eliminating spam duplicate listings.

SETTLEMENT

48h Escrow & 72h Dispute

Buyer funds held safely until delivery. Return disputes verified against VIN and fitment records—eliminating wrongful seller penalties.

Provenance: Vehicle, make, and OE spec counts are from committed database snapshots. 191,646 fitment records are live and enforced by continuous-integration data validation pipelines.

From a seller's spreadsheet to a verified fit

Traditional parts sellers don't write code or manage APIs. We built a 4-gate automated importer and paired it with on-site mall assistance to onboard stores in hours.

Customer Support in Major Automotive Clusters

To overcome merchant technology friction, Mobeeli deploys customer support directly across major automotive hubs (e.g. MGK Kemayoran). Field engineers handle data ingestion for shop owners on-site with zero manual data entry required from the merchant.

Urban Micro-Fulfillment Hubs 24/7

Partnering with physical automotive malls (MGK Kemayoran, Atrium Senen) transforms traditional kiosk space into distributed urban fulfillment hubs without cannibalizing walk-in trade.

Strict Price Parity Guarantee

Online prices on Mobeeli are strictly pegged to physical counter prices. Zero predatory digital discounting that undercuts physical walk-in footfall or damages landlord tenant relations.

PROTECTS MALL TENANCY

Click-and-Collect & Workshop Links

Car owners verify part fitment online and select "Collect & Install" at the mall's 100+ partner repair bays. Digital orders actively drive real footfall and workshop service fees directly into the building.

BOOSTS PHYSICAL TRAFFIC

Smart-Routing to 500+ Regional Garages

Independent workshops across Jabodetabek and West Java order directly via Mobeeli. Algorithmic dispatch smart-routes orders to the nearest mall tenant with verified stock readiness.

B2B WHOLESALE CHANNEL

MARKET OPPORTUNITY

\$5.3 Billion a year with zero vertical leader

Indonesia is Southeast Asia's largest automotive market, yet its aftermarket remains completely un-indexed. There is no AutoZone, no RockAuto, and no dedicated fitment layer.

63% signed up before we had a live product

We didn't pitch slides or prototypes. We walked into parts markets with our commercial terms and the fitment thesis. Store owners registered on our pre-signup form immediately.

38 of 60

SHOPS PRE-SIGNED UP

A 63.3% conversion rate across 3 competitive Jakarta markets. Store owners submitted pre-signup forms with contact details, catalog formats, and committed to Day-1 onboarding.

JUNE 2026 JAKARTA AUDIT

23 Brands

GIIAS QUALIFIED
PIPELINE

Exploratory dialogue with 23 manufacturer & tier-1 exhibitor booths at GIIAS (ICE BSD). While no formal agreements have been executed, all 23 expressed active interest in testing single-SKU catalog distribution upon rollout.

EXPLORATORY BRAND PIPELINE

\$0 Pre-Launch Ads

BOOTSTRAPPED
FIELD HUSTLE

100% of merchant demand and early pre-signups were secured with zero paid ads—driven entirely by direct founder field visits. Post-launch marketing will remain disciplined, focused primarily on B2B garage onboarding rather than broad consumer ads.

BOOTSTRAPPED VALIDATION

Field Status: Pre-launch phase. Production fitment database and order escrow engines are fully coded and tested.

0% to 5% capped fee — transparent & sustainable

The core transaction fee carries our unit economics. We give shops three months free to prove volume, then ramp gradually to a hard 5% cap.

Build vs. Partner: Why Mobeeli is hard to replicate

A software house can copy a marketplace UI for hundreds of millions of rupiah, but they hand over an empty app without fitment data. Replicating our moat costs billions.

OUTSOURCED / AGENCY ROUTE

Software Agency (Empty Shell)

- **App Coding Cost:** Rp 300M – Rp 600M over 6–8 months.
- **Zero Fitment Data:** Hands over a blank database. Agency has zero automotive domain knowledge.
- **Manual Data Trap:** Shops refuse to manually type 3,000+ SKUs into a generic form.
- **Fragile Maintenance:** Ongoing tech debt, buggy models, and zero industry relationships.

Result: Expensive "Ghost Town" Platform

MOBEELI PROPRIETARY ASSET

The Mobeeli Engine (Day-1 Ready)

- **Curated Fitment Graph:** 191,646 relations & 5,924 vehicle variants pre-loaded.
- **Gated AI Ingestion:** Ingests complex distributor PDFs, Excels, and marketplace exports in hours.
- **Replacement Cost:** Rp 3.5B – 5.0B+ (~\$195K–\$280K USD) and 18–24 months of engineering.
- **Zero Partner Capex:** Plug-and-play day one for malls, distributors, and investors.

Result: Ready Moat · Zero Tech Debt · Zero Capex

Due Diligence Reference: Detailed cost-to-replicate engineering audit available in companion due-diligence dossier (Section 4.7 Technical Defensibility Study).

Built for automotive. Not bolted on.

Horizontal marketplaces prioritize consumer electronics and fashion. They cannot solve automotive parts without redesigning their entire product data model.

CAPABILITY	TOKOPEDIA / SHOPEE	MOBEELI
Fitment Database	✗ None (Text tags only)	✓ 191,646 verified relational records
Search Algorithm	Price first (rewards race-to-the-bottom)	✓ Fit first, then price
Catalog Architecture	100+ duplicate listings per single part	✓ Single-SKU official brand listing
Take-Rate Commission	17% – 20% all-in (destroys margins)	✓ 0% pilot → Hard cap at 5.0%
Return Dispute Policy	Buyer always wins; seller pays 2x courier	✓ 72h dispute clock + VIN OE check
Merchant Onboarding	Manual single form entry (hours/SKU)	✓ Gated AI Importer + Dedicated customer support

Feature Review: Audited June 2026 based on observed seller dashboard behavior, Tokopedia dynamic fee matrix, and Shopee return policies.

ARR trajectory to \$5.0M (Rp 88 Billion IDR)

Our model is anchored on onboarding high-volume wholesale distributors who trade tens of millions of rupiah monthly, rather than relying on high CAC retail ads.

Assumptions: Base case takes 50% GMV penetration of 30 anchor wholesalers, 75–80% growth-tier quota, and two full-time field sales reps from Month 1. Pegged at Bank Indonesia benchmark of 1 USD = IDR 17,800.

Who is building it

Three full-time founders with technical depth, automotive domain mastery, and operations grit. We coded and validated the platform before opening this round.

Yavet Arimathea Widjaja

Chief Executive · Founder

A lifetime in Canada, career across automotive aftermarket and tech e-commerce. Saw the multi-billion dollar fitment void in Indonesia and came home to build the infrastructure.

Muhammad Salman Al Hafizh

Chief Technology · Co-founder

Architected and coded the production platform from scratch: the 191k+ fitment graph, gated AI importer, escrow state machine, and fails-closed automotive matching algorithm.

Ghany Widito Baskoro

Chief Operating · Co-founder

Operations, offline distribution, and commercial partnerships: manages the logistics network, B2B payment escrow, and the wholesale merchant pipeline feeding the anchor tier.

The founding team has been full-time without salaries. The product, graph, and legal entity were operational before seeking outside capital.

The Investment Ask: Rp 10 Billion IDR

We are raising Rp 10 Billion IDR (~\$562K USD) to scale distribution across Jakarta's primary automotive hubs and establish the unassailable vertical standard.

TARGET ROUND SIZE

Rp 10 Billion IDR
(~\$562K USD)

10% Equity · Rp 100 Billion IDR Post-Money (~\$5.62M USD)
18 Months of Runway to Series A · Pegged at Rp 17,800 / USD

18-MONTH OPERATIONAL MILESTONES

- 01 **300 Shops Trading:** 30 anchor wholesalers & 270 growth stores locked into Mobeeli.
- 02 **Rp 88 Billion IDR (\$4.95M USD) ARR:** Base-case monthly run-rate reached at Month 18.
- 03 **\$3.8M Cumulative Booked GMV:** Sustained transaction volume transacted across hubs.
- 04 **Series A Ready:** Positioned for a \$3M–\$8M institutional venture round for SEA expansion.

USE OF FUNDS

- **40% (Rp 4.0B / ~\$225K):** Engineering expansion (scale dev team from 3 to 8, mobile apps).
- **30% (Rp 3.0B / ~\$168K):** Field sales teams & customer support across MGK & Senen.
- **18% (Rp 1.8B / ~\$101K):** B2B workshop acquisition (500+ garages) & market rollout.
- **12% (Rp 1.2B / ~\$68K):** Working capital, heavy-logistics integrations & compliance.

WHY INVEST NOW

- **Fee Hike Catalyst:** Marketplace commission hikes this year are driving shops to leave.
- **Moat Already Built:** 191,646 fitment records exist. Nobody else has this database.
- **Product Ready:** Capital buys immediate GTM distribution, not prototype R&D risk.
- **Pre-Signed Demand:** 38 shops registered on pre-signup forms in 3 weeks waiting for rollout.

Valuation & Exchange Rate Note: Pre-seed round structured at Rp 10.000.000.000 (Rp 10 Billion IDR) for 10% equity (Rp 100 Billion IDR post-money valuation). Dual-currency conversions anchored at Bank Indonesia benchmark of 1 USD = IDR 17,800 (~\$562K USD round size / ~\$5.62M USD post-money). Subject to prevailing spot rate at closing.

One platform to unify Indonesia's auto industry

"Every part, verified to fit."
